# JUMO Quantrol LC100/LC200/LC300

## Universal PID Controller Series

### Brief description

The Quantrol series is available in the three DIN formats 48 mm x 48 mm, 48 mm x 96 mm, and 96 mm x 96 mm. It is used for two-state and three-state control applications as well as for the control of regulating valves or SCR power controllers via a continuous controller output.

The universal analog input for RTD temperature probes, thermocouples, or current/voltage signals is user programmable. The setpoint value, the actual value, and all parameters are displayed on two seven-segment LED displays (red/green) with one or two decimal place(s). The values can be displayed in °C or °F. Depending on the format, up to five relay outputs with a switching capacity of 3 A / 230 V or up to four logic outputs 0/14 V are available. The switch position of the relays or logic outputs is displayed using yellow LEDs. Different functions can be assigned to these outputs. An analog output 0 to 10 V or 0(4) to 20 mA is configurable as continuous controller output, actual value output, or setpoint value output. Using the binary input, the device settings and operation can be locked, a ramp or the timer can be activated, or self-optimization can be initiated. The supply voltage is optionally AC 110 to 240 V or AC/DC 20 to 30 V.

The controller has a ramp function with adjustable gradient for constant setpoint change. In addition, a special firing curve for small pottery kilns can be used which allows controlled starting and time dependent firing. The user can enter setpoint values, gradient, and firing time directly at the device.

The device can be connected to host systems or devices using the RS485 serial interface. Instead of operating the device from the front, the user can also program the controller using the setup program and USB interface; this requires no additional voltage supply for the controller. The Quantrol series, like all JUMO controllers, is also equipped with reliable JUMO self-optimization (autotuning).

### Special features

- 48 × 48, 48 × 96, 96 × 96 mm formats
- Two-state/three-state and continuous controller
- Sensor monitoring
- Up to 5 outputs
- Self-optimization (autotuning) for exact PID control
- Manual/automatic mode
- Configurable limit value monitoring (alarms)
- Setpoint changeover
- Level inhibit and key lock
- RS485 interface (Modbus RTU)
- Ramp and timer function
- Firing curve for pottery kilns
- Push-in controller insert
- Setup interface (USB Mini-B)

## Description

### Self-optimization (autotuning)

Standard features include the tried and tested self-optimization (oscillation method), which makes it possible for the controller to be matched to the control loop by a user who is not a control technology expert. Here, the reaction of the control path to the specific variable changes is evaluated and the controller parameters proportional band, reset time, derivative time, cycle time, and filter time constant are calculated.

### Ramp function

The ramp function is used for a constant change of setpoint value  $w$  up to the ramp limit value  $SP$  (entered setpoint value). A rising or a falling edge arises depending on the actual value at the time of ramp start  $t_0$ . The slope is defined by a gradient which is entered during the controller configuration.

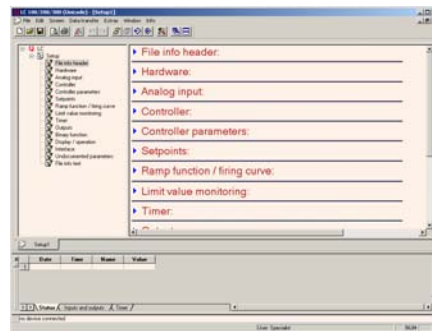

### Timer

The timer is started manually or automatically (after power on, for example). When the timer expires, the timer output signal changes its state (configurable). The timer can be used to implement functions like time-limited control or setpoint changeover.

### Setup program

The setup program provides the user with an easy and comfortable way to configure the controller using a PC.

The PC has to be connected to the controllers USB interface (Mini-B type) with a USB cable. Thereby the controller is powered over the USB interface. As a result, no mains supply is required during the configuration.

### Firing curve

The firing curve is used for controlled starting and time-dependent firing of small pottery kilns. The user can enter setpoint values, gradient, and firing time directly at the device.

### Limit value monitoring

The controller is equipped with two limit value monitoring functions, each with eight configurable alarm functions. Any analog signals can be selected as actual and setpoint value from a selector. When a limit value is exceeded, a signal can be displayed or an internal controller function initiated. With the limit value monitoring, extensive alarm and limit value functions can be implemented.

## Controller parameters

All the parameters and their meanings are included in the table. Some parameters may be missing or meaningless for a particular type of controller.

Parameters	Value range	Factory setting	Meaning
Proportional band 1 (Pb1)	0 to 9999 digit	0 digit	Size of the proportional band
Proportional band 2 (Pb2)	0 to 9999 digit	0 digit	The controller structure is not effective with Pb = 0 (behavior identical to limit value monitoring). For a continuous controller, Pb1 must be > 0.
Derivative time (dt)	0 to 9999 s	80 s	Influences the differential component of the controller output signal
Reset time (rt)	0 to 9999 s	350 s	Influences the integral component of the controller output signal
Cycle time 1 (Cy1)	0 to 999.9 s	20.0 s	When using a switched output, the cycle time should be chosen so that the energy supply to the process is as continuous as possible without overloading the switching elements.
Cycle time 2 (Cy2)	0.0 to 999.9 s	20.0 sec	
Contact spacing (db)	0.0 to 999.9 digit	0.0 digit	Spacing between the two control contacts of the three-state controller
Switching differential 1 (Hys1)	0.0 to 999.9 digit	1.0 digit	Switching differential of a switching controller with proportional band Pb = 0 (behavior identical to limit value monitoring)
Switching differential 2 (Hys2)	0.0 to 999.9 digit	1.0 digit	
Working point (y0)	-100 to +100 %	0 %	Output level for P and PD controller (if x = w then y = y0)
Output value limit 1 (y1)	0 to 100 %	100 %	Maximum output value limit (only effective if Pb > 0)
Output value limit 2 (y2)	-100 to +100 %	-100 %	Minimum output value limit (only effective if Pb > 0)

## Connection diagram

The connection diagram in the data sheet provides preliminary information about the connection possibilities. For the electrical connection only use the brief instructions or the operating manual. The knowledge and the correct technical execution of the safety information/instructions contained in these documents are mandatory for installation, electrical connection, and startup as well as for safety during operation.

The terminal strips on the device rear are equipped with screw terminals. Please refer to the technical data for specifications concerning the conductor cross section.

Connection	Symbol	LC100	LC200/LC300
<b>Analog input</b>			
Thermocouple		9 8	10 11
RTD temperature probe, 2-wire		10 8	9 11
RTD temperature probe, 3-wire		10 9 8	9 10 11
Voltage DC 0 to 10 V (usable alternatively to binary input)		12 11	7 8
Current DC 0(4) to 20 mA		9 8	10 11
<b>Binary input</b> for potential-free contact (usable alternatively to analog input DC 0 to 10 V)		11 12	7 8
		<b>Output:</b>	<b>1 2 3 4 5</b>
<b>Analog output</b> DC 0 to 10 V, DC 0(4) to 20 mA		13 14	12 13
<b>Relay output</b> (N/O contact) (max. 3 A at AC 230 V, resistive load)		4 13 6 5 14 7	4 12 14 16 18 5 13 15 17 19
<b>Logic output</b> (DC 0/14 V)		13 7 14 6	12 14 16 18 13 15 17 19
<b>RS485 interface</b>		7 6	14 15
Output 1 as standard; outputs 2 to 5 optional (options 1 to 4)			
<b>Voltage supply</b>		L1 (L+) N (L-)	L1 (L+) N (L-)
<b>Setup interface</b>	USB socket, type Mini-B 5-pole

## Order details

		<b>(1) Basic type</b>	
		702031	Quantrol LC100 (format 48 mm x 48 mm) 1x analog input (universal), 1x binary input <sup>a</sup> , 1x relay output (N/O contact)
		702032	Quantrol LC200 (format 48 mm x 96 mm, portrait format) 1x analog input (universal), 1x binary input <sup>a</sup> , 1x relay output (N/O contact)
		702034	Quantrol LC300 (format 96 mm x 96 mm) 1x analog input (universal), 1x binary input <sup>a</sup> , 1x relay output (N/O contact)
		<b>(2) Version</b>	
X	X	X	8 Standard with factory settings
X	X	X	9 Customer-specific configuration (specifications in plain text)
		<b>(3) Option for expansion slot 1</b>	
X	X	X	0 Not used
X	X	X	1 1 relay output (N/O contact)
X	X	X	2 1 logic output
X	X	X	3 1 analog output (configurable)
		<b>(4) Option for expansion slot 2</b>	
X	X	X	0 Not used
X	X	X	1 1 relay output (N/O contact)
X	X	X	2 1 logic output
X	X	X	4 1 RS485 interface
		<b>(5) Option for expansion slot 3</b>	
X	X	X	0 Not used
	X	X	1 1 relay output (N/O contact)
	X	X	2 1 logic output
		<b>(6) Option for expansion slot 4</b>	
X	X	X	0 Not used
	X	X	1 1 relay output (N/O contact)
	X	X	2 1 logic output
		<b>(7) Voltage supply</b>	
X	X	X	23 AC 110 to 240 V +10/-15 %, 48 to 63 Hz
X	X	X	25 AC/DC 20 to 30 V, 48 to 63 Hz

<sup>a</sup> Binary input for potential-free contact (usable alternatively to analog input DC 0 to 10 V).
